Problem Set 8

Discrete Mathematics

Due on the 4th of April, 2024

- (10 pts) 1. Including the instructor, there are 32 people in our class. Prove that two of these people were born on the same day of the month.
- 2. As of the 28th of March, 2024, there are over 8.1 billion people living (10 pts) on Earth. A person's heart will beat no more than 7×10^9 times over their lifespan. Show that there are two currently-living people on Earth whose hearts have beat the exact same number of times.
- 3. Let $n \in \mathbb{N}_+$ and consider $A \subseteq \mathbb{N}$ such that |A| = n + 1. Prove there (20 pts) exist $x, y \in A$ with $x \neq y$ such that $n \mid x - y$.
- (20 pts) 4. Consider $S := \{3,4,7,8,9,10,12,15,18,19,27,28\}$ and $\mathcal{X} \subseteq S$ with $|\mathcal{X}| \geqslant 9$. Show that there exist three *distinct* elements $x_1, x_2, x_3 \in \mathcal{X}$ such that $x_1 + x_2 + x_3 = 40$.
- 5. Recall that $\binom{n}{0} = \binom{n}{n} = 1$ for all $n, k \in \mathbb{N}$ when $k \leq n$. (20 pts)
 - (a) Show $\binom{n}{k} = \binom{n}{n-k}$ for all $n, k \in \mathbb{N}$ where $k \leq n$.
 - (b) Show $\binom{n+1}{k+1} = \binom{n}{k+1} + \binom{n}{k}$ for all $n, k \in \mathbb{N}$ where $k \leq n$.
- 6. Prove that $|\mathbb{P}(X)| = 2^{|X|}$ for any finite set X.

¹ For simplicity, you may assume the human population will only monotonically increase over time from the point this problem set was assigned.
